INTRODUCTORY

This catalogue is entirely new, and supersedes all previous issues. In this edition some "out of date" articles have been omitted and many new features added. Prices have all been revised, and are in every case free on board cars at Chicago, except where specified to the contrary. All goods are carefully packed, and our responsibility ceases when we obtain a proper receipt from the transportation company.

We cannot guarantee the prices given in this catalogue for any length of time. However, prices on tools and machinery are not subject to frequent changes, and our customers are therefore right in assuming that the prices in this catalogue are in general correct. We uphold quality in every instance, and are prepared to warrant every article sold.

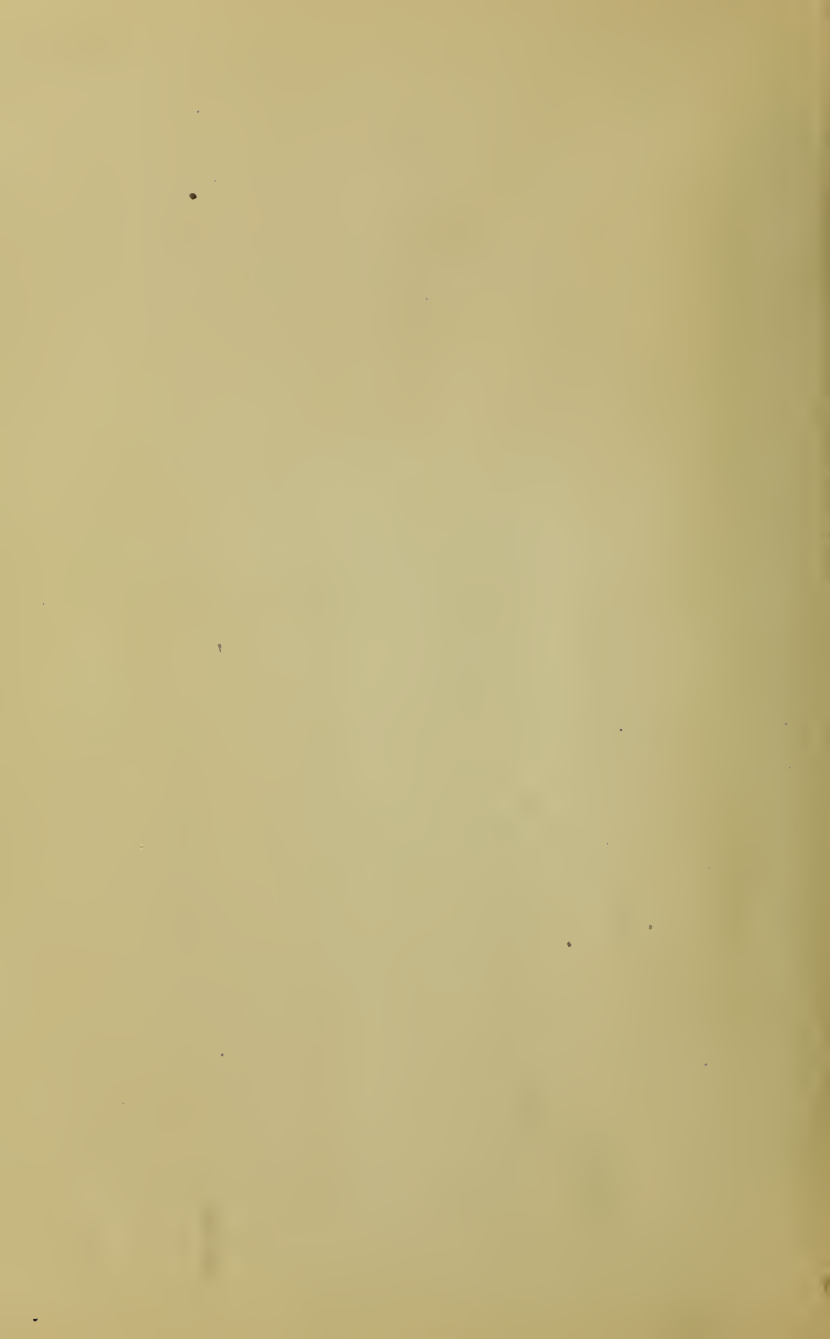

A list of food supplies which we sell will be found in this catalogue, but prices are not given, as these articles fluctuate in value so frequently that a price list is sure to be misleading and unsatisfactory. We will gladly quote you prices at any time on food supplies which you may be in need of.

When persons ordering goods are unknown to us, the order should be accompanied by cash, or references as to financial responsibility should be given. The neglect of this precaution causes delay in shipment, which is often vexatious to customers. We do not ship goods C. O. D., because it is too expensive, and often unsatisfactory to all parties concerned.

CHAPMAN & SMITH COMPANY,
CHICAGO.

FEBRUARY, 1899.

BAKERS' SUPPLIES

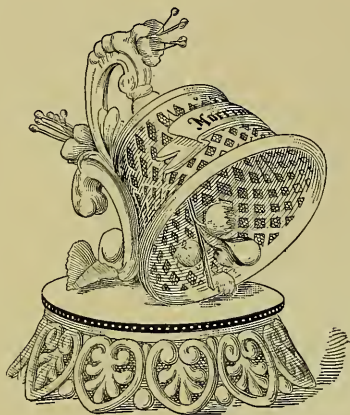

CAKE ORNAMENTS

We aim to keep always in stock all the ornaments quoted below. However, we sometimes have an unusual demand for some numbers, which exhausts the supply before additional stock can be obtained. In such cases we shall be glad to have the privilege of substituting ornaments similar in style and price to those ordered.

All goods on this list are packed by the manufacturer, and shipped by us in the original package; therefore we cannot be responsible for breakage. Where two or three ornaments are packed in one box, we cannot sell single ornaments. Please order by number.

PANS OF ANY SIZE TO ORDER

We make pans of any size to order of Russia Iron, Sheet Steel or Tin. Instructions should be given specifically as to material and dimensions throughout. In giving measurements state whether they are taken on the outside or inside, and let us know whether the edges are desired straight or flared. In ordering special pans, it should always be borne in mind that the value of a pan depends largely upon the way it can be cut out of a sheet of metal. Regular pans are cut out without any waste, and for this reason a slight variation may double or treble the cost.

CREAM LOAF PANS

Each pan will bake six round loaves, each 14 inches long.

Made of Russia Iron.....each \$2 50

KING LOAF PAN

Bakes a square loaf that cuts into slices resembling a diamond in shape. Each pan bakes two loaves 13 inches long and 3 inches on a side. Made of tin.

Price, each.....\$0 50

QUEEN LOAF PAN

Each pan bakes two round loaves 13 inches long and $3\frac{1}{4}$ inches in diameter. Made of tin.

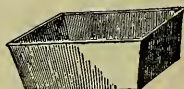

Price, each.....\$0 50

REVOLVING SLICER

For slicing apples, Saratoga potatoes, pumpkins, cucumbers and other vegetables.

Price, each \$0 50

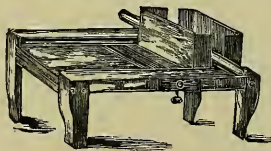

ALMOND GRATER

This grater possesses the merits of a clean, sharp cutter that will not choke up, and will, for its size, do more work in less time than any other grater made for the same purpose. The peculiar form of teeth gives a clean cut which grates the almonds in small granules, without mashing them, as is done in most graters.

Price, each \$0 85

ALMOND SLICER

Price, each \$2 50

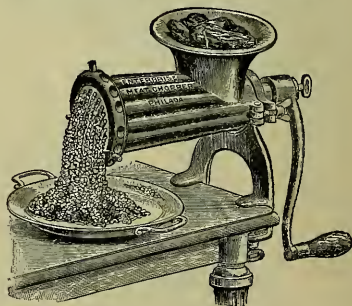

UNIVERSAL CUTTING AND GRATING MACHINE

This little machine is of great value to bakers, confectioners, restaurateurs, etc., as it comprises in a compact form an efficient cutter and slicer for fruits, vegetables, almonds, etc., and also by the change of discs, giving a most perfect mincer and grinder for a large variety of articles. It is furnished with six different discs, which can be instantly changed for either slicing or grinding.

Price complete, with six discs..... \$20 00
Extra discs.....each 1 40

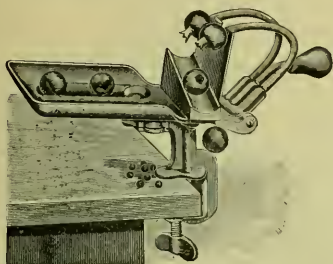

ENTERPRISE MEAT CHOPPERS

ENTERPRISE CHERRY STONER

Price, each \$0 70

THE "98" TURN TABLE APPLE PARER

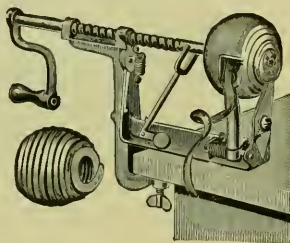

Patented May 24th, 1898. With Push-Off

This, the latest invention in the line of apple parers, combines the principles that have made the original T. T. Parer so popular, with entirely new features which add greatly to its effectiveness, and warrant the assertion that it is superior to all others for household use.

Parings fall clear of working parts. It pares very close at both ends of the apple. The knife recedes as it passes the end of the fork, leaving abundant room for placing the apple on the fork. Push-off is automatic, simple, but positive.

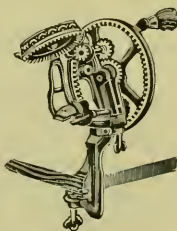

Price, each \$0 70

WHITE MOUNTAIN APPLE PARING, CORING AND SLICING MACHINE

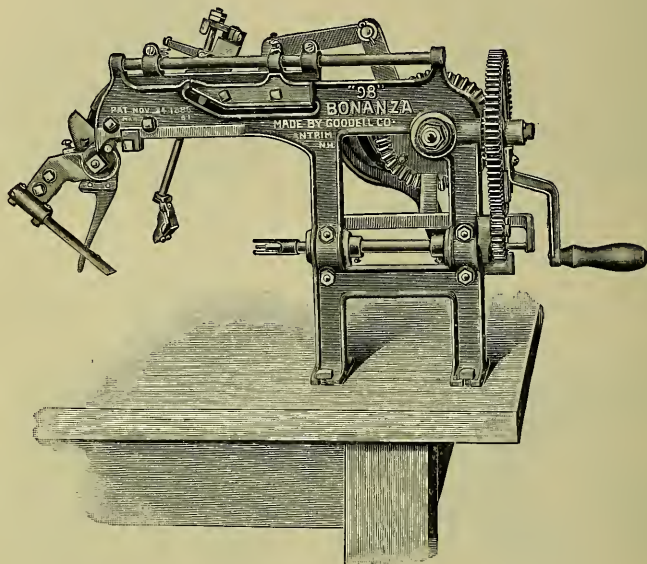

Price, each \$0 50

READING APPLE PARER

No. 78, price, each \$0 75

THE "BONANZA" APPLE PARER AND CORER

The Bonanza Parer has been on the market several years; it has given universal satisfaction, and established a reputation for durability, efficiency and speed unequalled by any other hand apple parer.

We have no hesitation in recommending this machine in the very highest terms to any person who has use for an apple parer to run by hand. Price, each ----- \$6 50

THE "EUREKA" APPLE PARER, CORER AND SLICER

Particularly for Large Wholesale Dealers

This machine has no competitor, as it is practically the only power apple parer in the market. It is not an experiment in any sense of the word, having been in use for years. Its merits are beyond question, and it has long been recognized as the leading machine for hand or power by evaporators, canners and bakers the world over.

It is used in every apple growing state in the United States, in Canada, England, Germany, France, Switzerland and other foreign countries, giving universal satisfaction, whether used by hand or power. Price, each ----- \$20 00

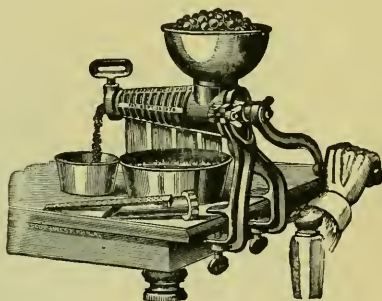

Write for special circulars with cut and full description.

The mesh of a sieve indicates the number of wires to an inch. A twelve mesh sieve has twelve wires to an inch, or in other words, the wires are one-twelfth of an inch apart. The diameters indicate the outside measurement across the sieve at the bottom. All of our 18 inch steel sieves and all metallic sieves have wire cross pieces at the bottom.

BAKERS' SIFTERS

Hunter's Improved Lightning Sifter. Hand or Power

For Bakers, Millers, Flour Dealers, Large Hotels.

They loosen and lighten the flour, thereby producing greater bulk. Made heavy and strong, with iron shaft running entirely through the sifting cylinder, which has heavy iron arms. The entire cylinder may be removed at any time. All brushes and sieves are adjustable and interchangeable. All sifters are bound on top with iron.

Pulleys for power, either No. 1, 2 or 3, extra according to size.

BAKERS' SIFTER

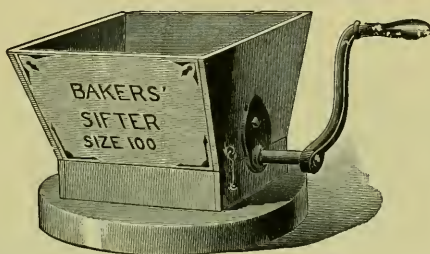

Size 200

This Sifter is the same as our No. 100, except longer and larger capacity. Not so strong and durable as our Nos. 1, 2 and 3 sifters, but a good sifter for the money. This size is only arranged for a baker's trough, being too long for top of barrel. Weight of poplar sifter, 33 lbs. Size, 26 inches long. Hopper holds about 50 lbs.

Net price in Poplar wood \$8 00

BAKERS' SIFTER

Size 100

This Sifter is intended to supply a demand among retail bakers for a cheap sifter. It is not as strong and durable as our sizes Nos. 1, 2 and 3, but is the best for the price in the market. The sifting is done by means of brushes revolving over a concave sieve. It is made mounted on a barrel cover as illustrated, or with slides for bakers' trough, same as our No. 200. Size of sifting cylinder, 13 inches long, $7\frac{1}{2}$ inches in diameter. Weight, 20 lbs.

Price in Poplar \$5 00

LABELLE EGG AND SPONGE BEATER

All iron—cannot get out of order. Beats up from one to seven dozen eggs in ten minutes. Large numbers of these beaters are in use in various sections of the country. All users testify to their general utility and adaptability to this class of work. Price, each.....\$20 00

HUNTER'S IMPROVED PNEUMATIC SPONGE BEATER

For bakers, confectioners, hotels, cracker manufacturers, etc. Illustration shows Machine No. 4 in position to use.

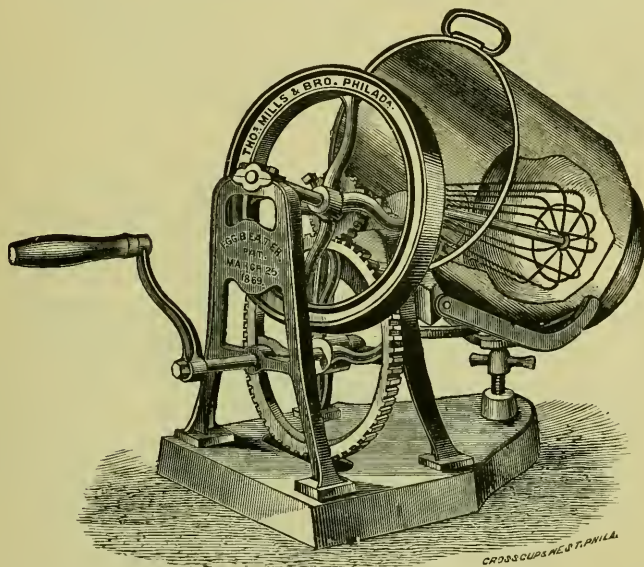

Intended for large batches of eggs and sugar. Operated on the pneumatic principles, which surpasses anything in its line ever before invented. By means of an air tube through the Agitator stem, at every up stroke the air is admitted to the bottom of the cylinder under the eggs and sugar, and at the down stroke a valve is closed, which forces the air out through the eggs and sugar, thus making the batch light and puffy and most perfectly beaten.

Constructed with strong single and double Tanks, mounted on legs at a convenient height. Between the Tanks there is water space, for using warm water in winter and cold water in summer for tempering the eggs, which is very important for rapid and perfect work. For making sponge, beat eggs one minute, then add sugar. These machines all have lids, and the large size braces to hold secure to floor.

No. 2,	Single Enameled Iron Tank; capacity, 2 to 3 dozen in 5 minutes	-----	\$15 00

PATENT BEATING OR MIXING MACHINE

For Eggs, Sponge Icing and Marshmallows

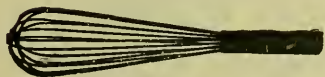

No. 1, For hand power	price \$ 25 00
" 2, For hand or power	" 65 00
" 3, For power only	" 100 00

This machine is the only practical one in use, the frame being made entirely of iron. The beater is made of stout wire, and has crank motion, which is the same as beating by hand. It is simple in its construction. The can and beater may be removed from the machine in less than half a minute. It can be operated by any boy, and will beat five dozen eggs in from ten to fifteen minutes. Those who are using them say they can save the price of the machine in a short time, as there is no waste.

Capacity of can on No. 1 Machine	9 gallons.

CHAMPION CAKE MACHINE

F. O. B. FACTORY

No. 1, For Hand each, \$100 00

This machine is at present in operation in 800 bake shops. It takes a pan from 15 to 16 inches in width. The intention in making it was to give the bread baker, who also makes a general line of cakes for show case work, a machine with which he could keep from one to three brick ovens running, and dispose of sugar, molasses, drop cake, jumbles and other goods in rapid order, keeping his ovens full until he gets through his work. Every baker knows that in doing this work by hand he has his oven empty, and the heat going to waste at least three-fourths of the time. Besides doing all this class of work, it also gives the baker a chance to compete with his larger neighbors in making ginger snaps, vanilla wafers, bars, fingers and jumbles, and the endless variety of goods turned out by the factories.

No. 1, For Power each, \$110 00

This machine is the same as hand power, only it has tight and loose pulleys and automatic cut-off. It is generally used with four and six pan reel oven.

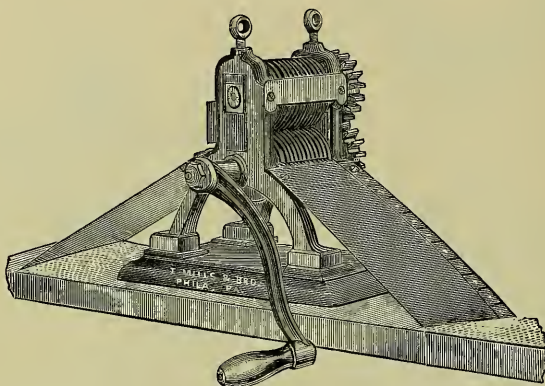

No. 2..... each, \$160 00

This is the size usually sold with a narrow cut convertible outfit. It is the most popular size machine for moderate size factories.

No. 3..... each, \$250 00

This size is made to correspond with the wide cut cracker machine. It will keep any twelve pan oven made going. It is the largest size machine of its class made.

1 " bread.....	"	125 00	8 " ".....	"	325 00
2 " ".....	"	175 00	10 " ".....	"	350 00

These mixers take less power than any other made. It will take years for the packing to wear out, and when it does wear out it can be replaced in ten minutes, and all you have to remove is a single wheel on each side. These machines are guaranteed to require only one-half horse power or less per barrel.

The three barrel mixer (the size generally used by expert bakers) is larger than any other three barrel mixer on the market. It is intended to let three barrels of dough raise in it, and with care as much as five barrels can be mixed.

SMALL DOUGH BRAKE

The rollers are of hard, well seasoned wood, 20 inches long, $4\frac{1}{2}$ inches diameter.

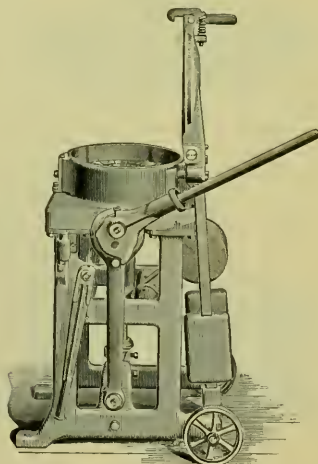

Price, each..... \$20 00

THE VAN HOUTEN DOUGH DIVIDER

Cuts 36 pieces at one operation, and only one lever to do the work. It is perfectly easy to operate—no hard pulling.

This machine is strong and substantial, weighing 550 pounds. By means of handles and wheels which are attached to it, it may be run around the shop with ease.

Price, each..... \$125 00

BAKE OVENS

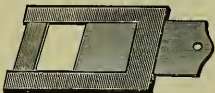

Dealing as we do in all manner of goods as used in the bakery line, we often have inquiries for bake ovens.

We wish it understood, however, that we are not manufacturers of ovens of any kind or description, although we will be glad at any time to assist our friends in securing information concerning ovens in general, or as regards any oven in particular.

We are by virtue of our position so situated that we can in some instances procure ovens for intending purchasers.

If anything in this line is desired, we shall be pleased to correspond with parties desiring same.

BAKERS' PYROMETER

Pyrometer or Heat Gauges for Indicating High Temperature

By the use of this instrument there need be no uncertainty or guess work as to the temperature of the oven; and consequently no chance of burnt crackers or bread; and it is obvious that with the oven at a proper temperature more work can be done in a given time. The pyrometer is made of metal, not liable to injury, like a mercury thermometer, and is accurate and durable for years. Biscuit and cracker bakers, and those having reel ovens, can fix it horizontally between the reel and side wall, at about 6 feet from the floor, the stem is 3 feet long to the collar and about $\frac{3}{4}$ of an inch in diameter, and should be inserted in the hot air, up flush with collar. When ordering Pyrometer, it is best to describe the oven used, giving dimensions and approximate temperature, so that the stem may be made to suit.

Price, 6 $\frac{1}{2}$ inch dial, 800 degrees, 3 feet stem	\$18 00

POUNDED ASH BAKERS' CARRYING BASKET

The basket here represented is meeting a wide sale among bakers, and we have designated the same as "Bakers' Carrying" Basket. The dimensions are 28 inches long, 17 inches wide, 10 inches deep.

Price, each.....	\$1 00
------------------	--------

PORTABLE GALVANIZED OVEN

Made of Heavy Galvanized Steel

They are adapted for hotels, restaurants, public and private institutions, for roasting meats, poultry and baking bread, pastry, etc. They will roast at the same time as many different kinds of meat as the oven will hold, and each kind will be perfectly sweet and free from taste or smell of the others, as the gases which arise are passed off through the escape pipe at the top. For baking bread and pastry they are unequaled by any oven in the market. A small quantity of coal or wood will keep them going for hours. The heat is regulated by dampers on each side of stove and in the pipe, by which any required degree may be maintained. When there is too much heat, open the dampers as much as desired, which admits the cold air and lowers the heat at once.

Our ovens are of heavy galvanized steel, made double throughout, having convenient openings, through which sand, which is a non-conductor, may be placed, thereby saving fuel, having the oven heat more even, and causing very little heat in the room where the oven is placed.

They are always shipped without sand, to avoid paying freight on it.

The stove to heat oven is made of extra heavy wrought steel, which is much more durable than cast iron.

Our grates are made of heavy steel bars, with wrought angle iron front and back of each shelf, thus making them very strong.

An oven to burn coal requires the stove that heats it to be made in a different manner from one that burns wood. So always state if you wish to burn wood or coal. Prices are the same.

COMMON SENSE URN

For Coffee, Tea or Milk. Stone Jar Reservoir

This reservoir or part that the coffee comes in contact with is stone, and has a stone cover, which prevents any of the essence or aroma from escaping, or any obnoxious substance reaching the solution.

The reservoir is entirely surrounded by hot water, which distills the coffee and keeps it to a boiling point, *but never boils it*; to boil coffee spoils it.

It has a cloth strainer attachment, whereby all deleterious substances are retained.

By following the directions we positively assert you can make the very best of coffee for one-half cent per cup.

DIRECTIONS.—Put a small quantity of either hot or cold water in the outside lip, cleanse the inside of the urn every time coffee is made, grind coffee fine as possible, then put in strainer sack and add boiling water in proportion of three and a half gallons to one pound of coffee, same will be ready for immediate use.

Planished tin casings and heavy copper bottom. Can be heated on range, or by kerosene, gas or steam coil.

3 gallons	each	\$7 50
4 "	"	8 35
5 "	"	10 00
6 "	"	11 25
8 "	"	12 50
10 "	"	15 00
12 "	"	18 35

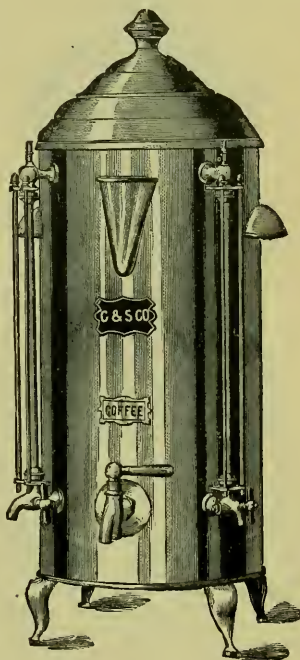

If urn is to be heated by gas or oil, it will require a base. Add for base for oil or gas stove, if wanted.

On 3, 4, 5 or 6 gallon	\$1 65
On 8, 10 or 12 "	2 00

We never send a base unless it is ordered. When a base is ordered we send a base for oil unless customer specifies that he wishes to use gas.

We generally order these urns shipped direct from the factory to our customers, so they are in good condition and not shop worn.

MARICABO COFFEE AND TEA URN

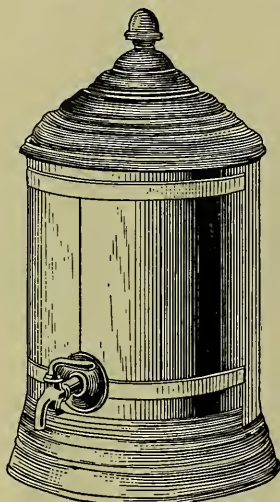

Heavy copper, nickel plated, with water and coffee gauges, showing quantity of each on hand. This is one of the best selling urns we have, and gives universal satisfaction. Gray enameled reservoir.

3 gallon	each	\$37 50

THE LATEST ENGINE OUT

EQUAL TO

"TWENTY MEN OF IRON CON-
STITUTION"

Actual 2 Horse Power Capacity

This Engine is built upon the interchangeable plan, each part being duplicate of the other. The best material and workmanship are incorporated in it, it being the intention that this Engine shall go out on the market built in such a manner that it will fulfill all requirements of a light power, and that it will stand the test of severe service. The crank shaft and connecting rod are of forged steel, each part of the Engine being scientifically constructed for the best practical results.

Can be run at *smallest expense*; when not developing power, no expense whatever.

No *engineer* required; a boy twelve years old can soon learn how to run and take care of Engine.

Is *always ready*; can be started on a moment's notice and stopped at will.

No *ashes*, smoke or dirt of any kind. Practically *no water* required, except say, 100 gallons, which is used over and over again, simply to cool the cylinder.

No *danger*; only a small quantity of gasoline is kept in building, say about a quart; all is enclosed in iron, and could not be ignited, except by willful carelessness.

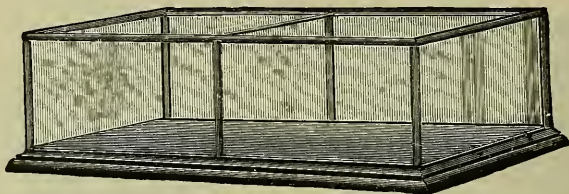

It will run a large ice cream freezer or several small ones.

We recommend this Engine for all light work, such as running ice cream freezers, small printing presses, small pumping outfits, ventilator fans, etc.

COST OF RUNNING. This Engine will run on about a gallon of gasoline per indicated H. P., or from 20 to 30 cents per day of ten hours.

We offer this Engine with all the trimmings necessary at spot cash..... \$135 00
Four Horse Power Engine, at spot cash 235 00

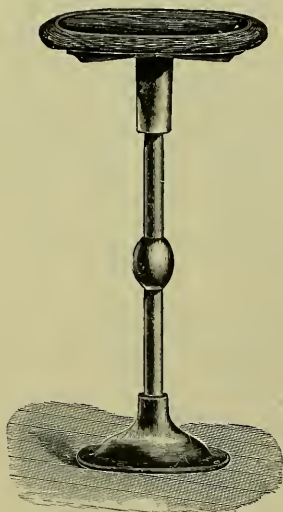

SHOW CASES

These cases are made of walnut, cherry, or oak, highly polished, and finished in a neat and substantial manner. They are 28 inches wide at base, 15 or 17 inches high in front and back. Heavy moulding. Double thick glass. Sliding doors. We can furnish these same cases with metal corners for a little higher prices. These cases are shipped f. o. b. factory, the freight rate being almost the same as from Chicago.

ICE CREAM MANUFACTURERS'
SUPPLIES

NO. 1 "PHILADELPHIA" ICE CREAM FREEZER

This machine is made in the most substantial manner. All the castings and bearings are heavily constructed. The steel shaft has turned bearings which fit into Babbitt metal boxes, making it run lighter and prevents the shaft from working loose. We furnish with this machine our Patent Spiral Dasher and heavy copper can. The tub is hand made of the best seasoned cedar. These machines can be operated either by hand, horse, steam-power, gas engine or motor. Speed, 100 revolutions.

Fast and loose pulleys.....	10 00

ADVANTAGES OF MILLS' PATENT ICE CREAM FREEZER

By referring to the cut on the opposite page, it will be easy for any one to see how this machine is operated, and the advantages it has over all other Ice Cream Machines.

1st. There are no parts to become disengaged from the machine, thus avoiding mislaying and the loss of such parts.

2d. The machine is made in the most substantial manner, the frame being made entirely of iron and built upon an iron base, so that there is nothing to warp or twist out of line.

3d. The freezing apparatus, consisting of one tub, one copper can and lid, and one dasher or beater, can be removed from the machine and replaced in less than half a minute, simply by sliding the sleeve which couples the lid up to the top of the slot in the sleeve wheel, and locking the same in its upper position by a slight turn of the hand, then with the other hand upon the lever attached to the dasher driving spindle, raise the same from the end of the dasher and lift the apparatus away.

4th. The copper cans are well tinned inside, and the tubs are made of the best seasoned cedar with heavy improved iron handles.

5th. It can be operated either by hand, horse, or steam power, and is warranted to freeze forty quarts in thirty minutes; twenty-five quarts in twenty minutes; eighteen quarts in fifteen minutes; twelve quarts in ten minutes; and is guaranteed to freeze smoother, with less ice and salt, and one-half the labor required by any other machine now in use.

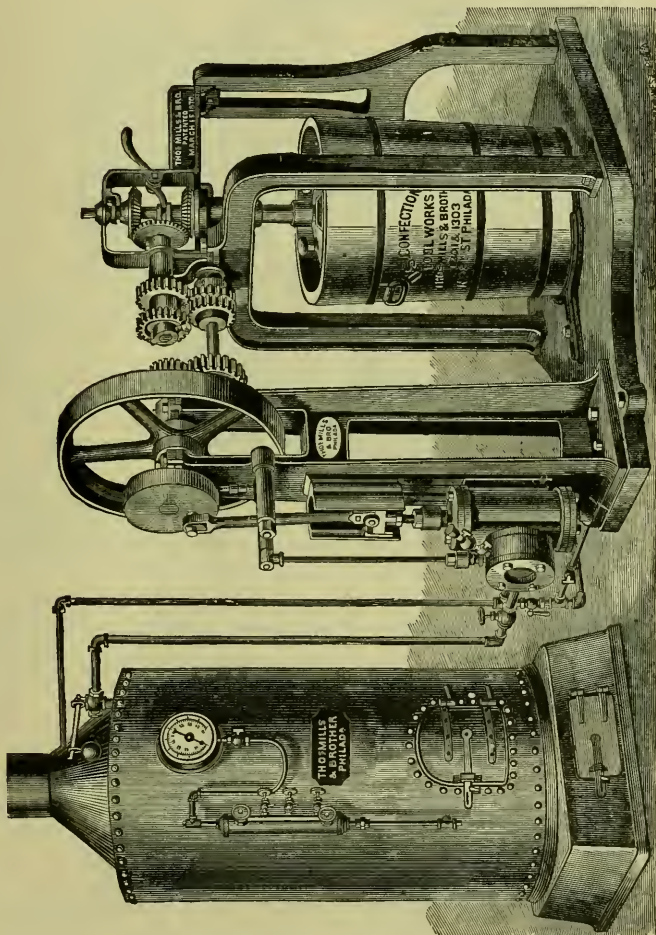

Parties who are using them say they can save the price of a machine in a short time in ice and salt alone, without taking into consideration the quantity of cream—it being more than doubled when the machine is properly operated—as we have testimonials to certify. The dasher or beater attached to this machine is so constructed that it removes the frozen cream from the inner surface of the can as rapidly as formed, while the deflection in the center of the beater directs the unfrozen cream to the side of the can, so that the whole body of cream is constantly changing position, insuring a rapid conversion into the desired frozen mass.

The opposite cut represents our Engine and Patent Ice Cream Freezer combined, with steam boiler attached, which occupies a floor space of 8 x 2½ feet. The boiler is made of the best steel, and is capable of sustaining enormous pressure. It is provided with safety-valves, steam and water gauges, blow-off and try-cocks, injector, etc. The engine and freezer being built on the same base secures a direct connection by cut-gearing (which is perfectly noiseless), thus avoiding the use of belting, and enabling us to put these machines into much less space than any other now made. It is simple in its construction, requiring no engineer. Any person of ordinary ability can manage it. Is economical in fuel as well as in space, requiring no more coal than any ordinary sized stove. The machine can be made to run faster as the cream thickens (showing the great advantage of making ice cream by steam power) by simply turning on more steam, and you can gain more cream by one or two quarts than you would by the hand machine. Parties intending to put in steam power should see the above before looking elsewhere.

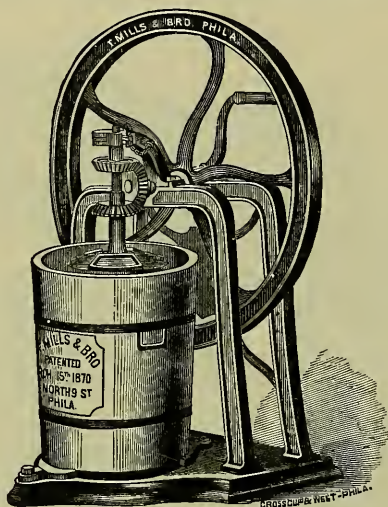

Price, complete.....	\$500 00
Price, without the boiler.....	350 00

Construction.—Substantial throughout. Built for work. Working parts simple and not liable to get out of order. Steel teeth may be sharpened while on the cylinder, or if broken may be easily removed and others fastened on at a small cost.

Operation.—Quick and easy running, requiring very little power. Cannot be clogged with ice.

Capacity.—The size of cake of ice given above indicates in inches the width and thickness of the largest piece of ice each machine will take. The length of the piece of ice is immaterial, as the cutting is continuous.

MALLEABLE IRON CAN TURNER

An attachment to turn the can while padding the cream.

Price, each \$0 25

Price, per dozen \$2 00

MILLS' DISC ICE BREAKER

PATENTED

No. 00

After experimenting and manufacturing ice breakers for the last twenty years, we are now prepared to put on the market the cheapest, most economical and durable machine ever offered to the trade.

By referring to the above cut, it will be seen that our ice breaker is very simple, strong, and we warrant it not to get out of order. The teeth are made of cast steel and shaped like a harpoon, and can be taken out and replaced in one minute.

The advantages we claim are simplicity, durability, quietness of running, rapidity of work, and small power required. It will split the ice so there will be no fine waste, and when the teeth are dull they can be taken out and ground.

No. 00,	For hand-power, takes a cake 13 x 13.....	price \$50 00

IMPROVED PATENT ICE CRUSHERS

This Cut Represents the Nos. 1 and 2 Machines, Arranged for Power

After many years' experience in ice cream establishments, we have perfected these machines, so that they are now entirely satisfactory, and are the most powerful and substantial ice crushers ever offered to the trade. These machines are excellent for crushing ice into convenient sizes for various uses, doing the work with ease and rapidity. They save time and labor, breaking the ice to a uniform crystal, thereby insuring that degree of compactness most desirable for packing purposes—a fact acknowledged and highly appreciated by the many using them.

These machines are used by hotels, ice cream manufacturers, fish packers and others. They will break ice to any desired size, and can be run by hand or power.

For Prices and References, See Opposite Page

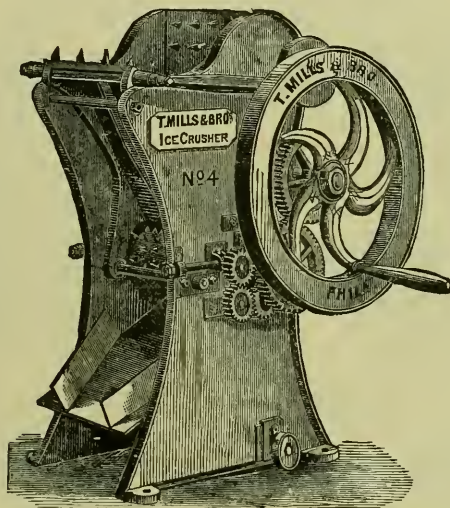

WOOD ICE RAMMERS

For packing ice around the freezer. Made of hard maple.

Head, $8\frac{1}{2} \times 2\frac{1}{2}$ inches; total length, 29 inches. Price, each ----- \$0 40

IMPROVED PATENT ICE CRUSHERS

This Cut represents the Nos. 3 and 4 Machine, for Hand or Power

With Rollers

No. 1,	for power, breaks 10 to 12 tons per hour, takes a cake 100 lbs.	\$300 00
" 2,	for hand or power, breaks 5 to 6 tons per hour, takes a cake 75 lbs.	200 00
" 3,	for hand or power, breaks 3 to 4 tons per hour, takes a cake 30 lbs.	100 00
" 4,	for hand power, takes a cake 20 lbs.	75 00
" 5,	for bar-rooms and families, takes a cake 10 lbs.	25 00

Without Rollers

No. 3,	for hand or power, breaks 3 to 4 tons per hour, takes a cake 30 lbs.	\$75 00
" 4,	for hand power, takes a cake 20 lbs.	60 00
" 5,	for bar-rooms and families, takes a cake 10 lbs.	20 00

No. 3 and 4, for steam-power, \$10.00 extra.

All but No. 5 are adjustable to break any desired size.

IMPROVED ICE CREAM FREEZING CAN

Round Bottom. Patent applied for

This freezer is made with the view of giving a stronger and more durable article than has heretofore been offered to the trade. The body is made of the best DXXXX charcoal tinplate. The bottom and rim on body are made of *malleable iron* and heavily tinned, thereby preventing rust and injury to the can by falling. The cover is made of *malleable iron* and provided with the improved catch. The handle is made of hard wood, supported by two malleable iron uprights.

METAL TOP ROUND ICE CREAM
CABINETS

Porcelain Lined Cans

A metal flange, nickel plated, extends down around the top of can, serving as a protection for the ice, and also preventing it from falling into the can when the cover is removed.

The advantages of a metal top are obvious, no cover to swell or joints to open up. Only the very best material is used in the construction of this Cabinet, viz.: Outside casing, selected oak, finished in oil, matched and beaded; between this and the inner wall, two layers of heavy non-conducting material and one inch air space, making the insulation perfect; heavy galvanized iron lining and jacket, brass tubing and cap for outlet.

The best Porcelain Lined Cans are used, thus keeping the contents free from any taint of rust or tin for an indefinite time.

ICE CREAM PAILS

With Tape Handles

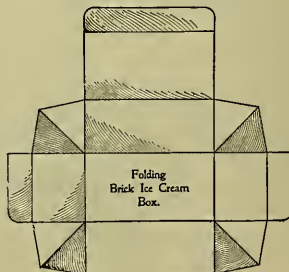

Each size comes 100 in a package

	Per 100.	Per 1,000.
Half pints	\$0 50	\$ 4 50
Pints	65	6 00
Quarts	85	7 75
Two quarts	1 50	13 90

These pails are carefully made from the best kind of board for holding water. They are neatly finished, and will be found the best there is on the market. It does not pay to buy paper pails that are poorly made.

No extra charge for printing customer's name when ordered in quantities of 500 or more of one size. This special printing always delays an order a few days, as the cardboard must be printed first and made into pails afterward.

RAPID LEMON SQUEEZER

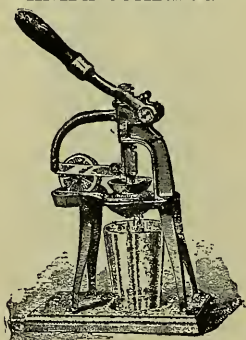

Advantages

1. It automatically presses and revolves the Lemon on the Cone, extracting all the juice with one motion.
2. The Cup and Cone are covered with Sheet Aluminum Metal, which is not affected by the acid of the Lemon.
3. The Cup and Cone form a Strainer which will not clog like the Perforated Strainers on other machines, and these parts are easily removed for cleansing.
4. The Glass Holder is adjustable to any height, and will therefore hold the Goblet or Tumbler close to the Squeezer Cup.
5. The machine is so simple that there is nothing to get out of order.

Nickel Plated. Price, each \$3 25

Made of Japanned Malleable Iron, with porcelain ball and bowl; it will resist the action of fruit acid, and be found clean and durable.

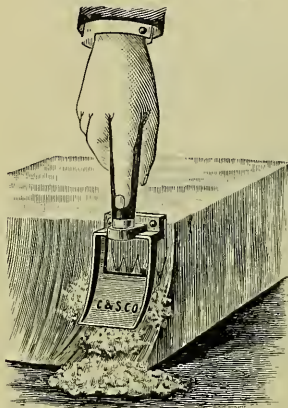

Price, each \$0 30

SAMPSON CORK EXTRACTOR

Each \$1 50

CROWN ICE CHIPPER

Is a simple, effective and cheap tool for chipping ice.

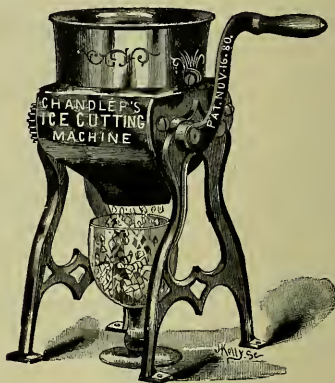

It is a well-known fact that in making ice cream or water ice the ice must be mixed with salt in order to produce a freezing action, and the smaller and more uniform the pieces are the quicker the freezing goes on, and the less ice is consumed in the process.

By the use of the Crown Ice Chipper, the ice is chipped into small and nearly uniform pieces, the guard projecting beyond the serrated cutting edge of the knife, making it impossible to cut off thicker pieces than the space between them. Only a minute's time is required to reduce a 15 to 20 pound block of ice into small pieces.

This tool is also highly recommended for use at bars, soda fountains, etc., or wherever fine ice is desirable for cooling purposes.

Crown. Price.....each \$0 40

CHANDLER ICE CUTTING MACHINES

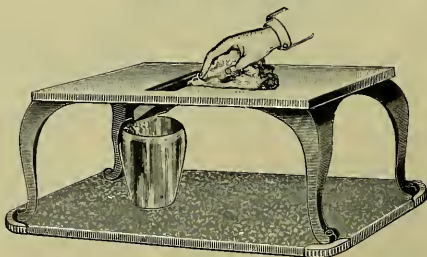

A small, compact, simple, strong and cheap machine, which cuts the ice into small diamond-shaped pieces with the utmost ease and rapidity. Can be attached by screws to any table, counter or shelf, and occupies a space only eight inches square.

No. 1.....each \$3 50
" 2....." 5 00

The No. 1 is intended for mixed drinks; the No. 2 for family use.

HAND ICE PLANES

The beds are made of cast iron, galvanized to prevent rust, with adjustable steel knife. The ends are all japanned. Mounted on neat crystallized tin boards. Packed one in a box.

Price.....each \$1 25

THE GEM ICE SHAVE

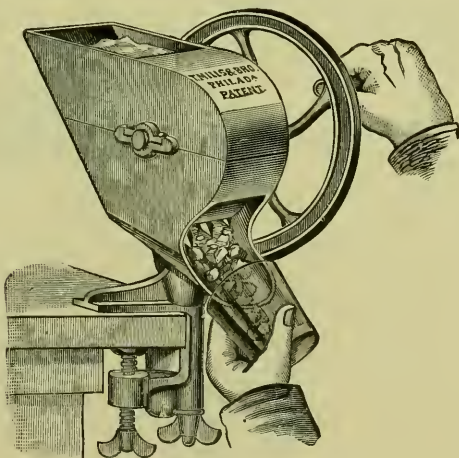

A simple and handy tool for shaving and collecting ice from blocks without removing the latter from the refrigerator or ice chest, and is the only tool of the kind in the market.

As shown in cut, it is constructed like an ordinary plane, made of galvanized cast iron, with a knife adjustable to shaving fine or coarse. In front of the knife is a receptacle about the size of a tumbler, closed by a lid, in which the shaved ice collects when the tool is pushed forward and backward on a block of ice. When filled, the lid is raised and contents emptied, which will be found as fine as snow. The tool is quite short and of convenient size to fit the hand, and can be used on any sized piece of ice as it lies in the refrigerator.

Any one who has tried to get a small quantity of fine ice by using an ordinary ice pick, and without taking the block of ice out of the chest, can readily appreciate the usefulness of the Gem Ice Shave. Saves time, labor, refrigerator, ice and patience.

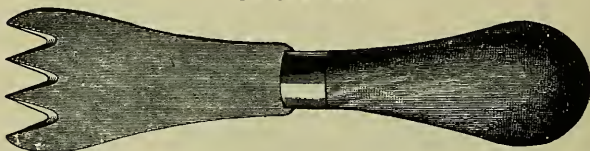

The Gem. Price.....each \$0 30

THE GREAT AMERICAN LIQUID SHAKER

This is the best machine devised for the purpose of mixing compounds—milk shake, lemonade, egg phosphate, lactarts, fancy drinks, frosting, etc. Fitted alike for the home, the drug store, confectionery, or the saloon. It is 8 inches high, 17 inches wide by 12 inches deep, weighs but 10 lbs., may be attached to any counter without injury, and can be placed in or taken out of position instantly.

This Shaker possesses the following points of superiority:

1. ITS COST—It is cheaper in price than any other first-class machine yet invented. Can be shipped by freight or express to any part of the United States or Canada, at one-half the expense of any other machine, as it weighs but 20 lbs. boxed ready for shipment.
2. ITS DURABILITY—There being none of the straining up and down motion, it will outlast any article made for a similar purpose.
3. ITS NOISELESSNESS—Each glass turns on its own axis, propelled by the revolution of the small wheels around the main wheel, all absolutely noiseless.
4. ITS SIMPLICITY—All is open and clear to the observer; nothing to get out of order.
5. ITS HANDINESS—It is small and handsome, and when placed upon a counter, marble slab or elsewhere, is an ornament and a source of attraction, by reason of the novelty of its motion and satisfactory working.

THE PEERLESS TABLE FURNACE

This furnace is far more economical than the coke furnace, as the consumption of gas may be regulated to meet the actual requirements. It will facilitate the neglect of insurance, as there is no danger of fire. It is always clean and neat, as there are no cinders, dust or ashes to remove. It relieves the workmen from all unnecessary heat; it is neatly and durably made, and will pay for the investment in a very short time.

Boxing, 75c.

All of these candy slabs are cut to order, and it always requires a few days for cutting and finishing. We have them boxed and shipped direct from the stone yard.

SLAB BARS

$\frac{5}{8}$ x $\frac{5}{8}$; $\frac{3}{4}$ x $\frac{3}{4}$; $\frac{7}{8}$ x $\frac{7}{8}$

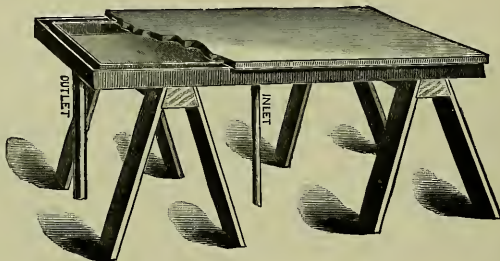

Cut to order any length desired

Price per pound when polished	\$0 12
Price per pound without polishing	05

We always send slab bars polished when the order does not give instructions to the contrary. We do not advise customers to buy unpolished bars, as they are likely to give dissatisfaction in this rough state.

THE COLLUM CANDY COOLERS

Manufactured in Five Sizes

The above cut represents the cooling principle of these Coolers. The whole thing is very simple, namely, the top plate rests in the water, and is always cold.

This is how it is done:

The water enters from the bottom, rises to the top. Now note (in the cut above) the dam, running parallel to all sides, forming a channel between both, projects into the top above the level of the under side of top plate; therefore, the water, to escape, is forced against the top, and then forced over the dam into the channel, and runs to the outlet.

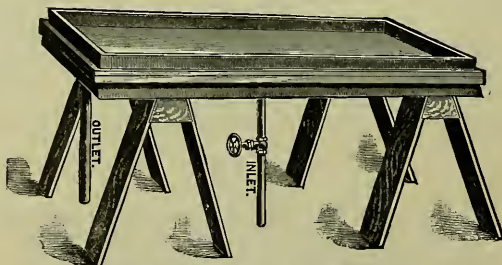

It follows that the Cooler must always be cold.

These Coolers are made of cast iron, except the top, which is of rolled steel plate, perfectly smooth and level.

THE HICKS' BUTTERCUP CUTTER

Patented Dec. 18, 1894, and Dec. 22, 1896.

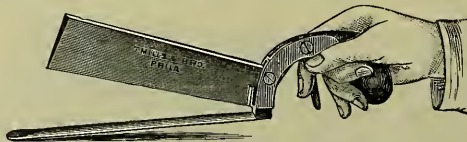

Price, net..... \$35 00

A PAYING INVESTMENT

The Hicks' Buttercup Cutter is a patent device for cutting by foot power all kinds of hard candy, and for automatically throwing back from the machine the candies as soon as they are cut. This cutter is simple in its construction, will not get out of order, is perfectly true in its adjustments, and is made of the best of materials. The foot power enables the operator to cut with ease the hardest candies. One pressure of the foot cuts the strip of candy into the proper size and throws the pieces back, thus leaving the hands of the operator free to put the strips of candy on the machine. So in a given time three times as much candy can be cut as by other machines worked by hand. This machine takes up but little room, and can be fastened to any table or stand.

CUT-DROP MACHINES

Lately Improved

This cut represents our Sour or Lemon Drop Cutter, which is used for a large variety of Cut Drops in different flavored candies, such as acid, lemon, mint, hoarhound, and many other cough mixtures.

The lower wheel carries the steel knives, which are secured to it, and the brass ring which they support, thus allowing the small cog-wheel to be held secure in its position, in order to push the candy from between the knives, where it is pressed and cut by the pressure of the top wheel on the edge of the knives. The Cut-Drop and Dice-Lump Machines are made larger and heavier, in proportion to the work to be performed by the same.

SIZE OF DROPS AS FOLLOWS :

No. 1.	Sour or Lemon Drop,	$\frac{3}{4}$	inch long,	$\frac{3}{8}$	inch wide.
" 2.	Cut-Drop,	1	" "	$\frac{5}{8}$	" "

6

Lately Improved With Delivery Apron

This cut represents our No. 1 and No. 2 machine combined on the same rollers, which comes cheaper than having the two in separate frames.

In this class of machines the rollers are not changeable, on account of the guide-plates, which, if not properly set in place, would make the machine practically useless.

These designs are made for one-cent sticks. The same designs are used for five-cent sticks, but increased in proportion. Any number of designs cut on one roller.

One-cent stick, any one pattern	\$12 00
“ “ “ two patterns	18 00
“ “ “ three “	24 00

The five-cent stick machines are made with larger rollers and frame, in proportion to the work to be performed.

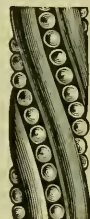

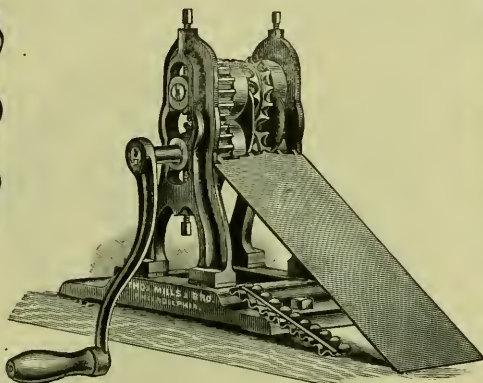

Five-cent stick, any one pattern	\$25 00
“ “ “ two patterns	33 00
“ “ Ice Cream Candy	25 00

We make a great variety of patterns, the above are only the most popular.

Ribbon or Crimp Machine, designed for one-cent sticks	\$15 00
Cable Stick Machine, " " " "	12 00

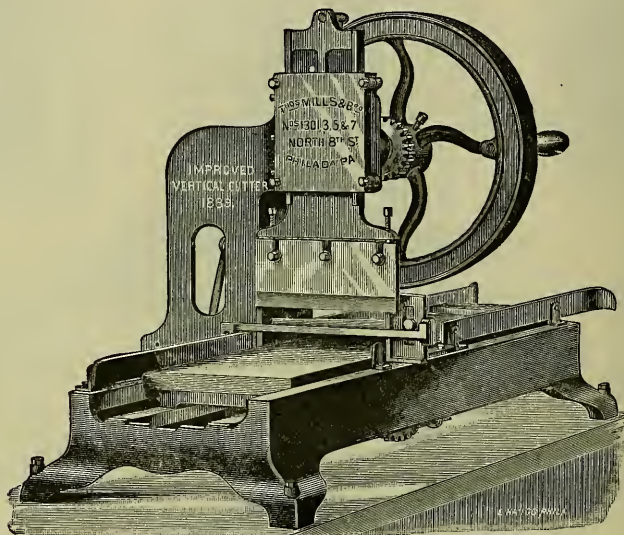

KISS OR LUMP CUTTING MACHINE

Is used for a large variety of work, as the candy is formed into any suitable size or shape before feeding it to the machine, which is formed of two rollers, having steel knives running their entire length. In turning the crank these knives run together, so that the candy is cut from both sides; and should it stick to either roller, it is knocked off by the revolving wings fixed on the vertical shaft, as shown in the engraving. It is also used in cutting caramels after they have been first cut into narrow strips.

No. 1, knives $2\frac{3}{4}$ inches long, $\frac{7}{8}$ inches wide	\$35 00

We make an attachment to this cutter for cutting caramels both ways at the same time. Will cut nine to twelve caramels at one time, according to size. They are made $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$ and 1 inch.

Price of attachment, No. 1 machine, 1	inch	\$ 9 00
" " " " "	$\frac{7}{8}$ "	9 00
" " " " "	$\frac{3}{4}$ "	10 00
" " " " "	$\frac{5}{8}$ "	11 00

Other sizes to order.

MILLS' IMPROVED SHEAR-MOTION CANDY CUTTER

By the construction of this machine the candy is at all times directly under the eye of the operator, there being no frame work overhanging to obstruct the view.

The feeding is accomplished by the combination with a rack forming part of the movable iron bed, into which works a cog-wheel operated by a ratchet-wheel and pawl, all attached to a shaft beneath the bed-plate.

An eccentric fixed on the main shaft gives motion through a universal joint to a rock-arm, which is provided with a slot, into which is fitted an adjustable stud having a pointer attached, the upper edge of the rock-arm forming a scale, so that the pointer can be set in an instant to make the knife cut any desired size from one-sixteenth of an inch to two inches.

The knife is arranged so that it will cut through candy two inches thick.

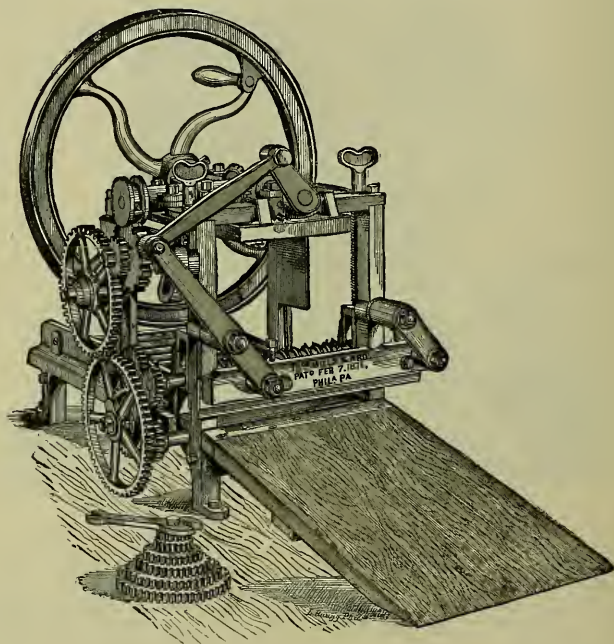

We furnish two knives with this machine. The one ground from both sides is used for caramels only, the other knife is used for Japanese cocoanut, cocoanut strip, walnut, peanut and almond bars, cream nut and other candies.

This machine will cut one thousand pounds of the above candies per day, and is giving entire satisfaction to all who are using it.

No. 1.	Size bed measures, 71 $\frac{1}{4}$ in. wide by 27 in. long.	Will feed from 1 $\frac{1}{16}$ in. up to 1 $\frac{1}{2}$ in.	\$75 00

PATENTED OSCILLATING PAN

It does not revolve, but oscillates in a peculiar manner, rolling and turning the goods with a motion it is impossible to imitate by hand. Standard size, 40 inches in diameter.

Special sizes made to order.

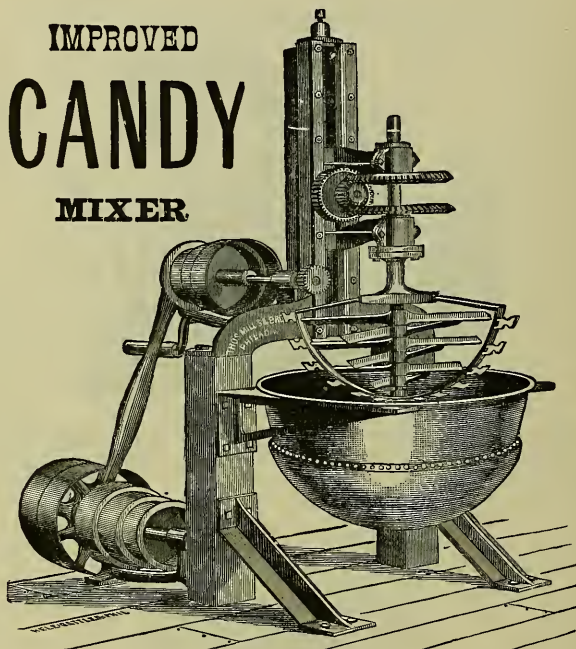

REVOLVING STEAM PAN

Standard Size, 38 inches in diameter

Special sizes made to order. Polishing or glazing machines made to order.

IMPROVED CANDY MIXER

This cut represents our Improved Mixing Machine, the beater of which has a double motion, and is provided with a series of scrapers, so that the materials being mixed are not allowed to remain on the sides of the kettle, but removed at each revolution, thus making it a thorough mixer for fig paste, marshmallows, gumwork of all kinds, and Japanese cocoanut.

Being furnished with speed-pulleys of three changes, the beater can be run to suit the work to be performed. The head which carries the gearing and beater, operated by a crank, are raised from the kettle when the work is completed, and are thus out of the way while the contents are being removed.

The kettles are made with a steam jacket, and are provided with inlet and outlet bungs for standard steam pipe fittings. The kettles can be made of any diameter from 36 inches down, and any depth from 18 inches.

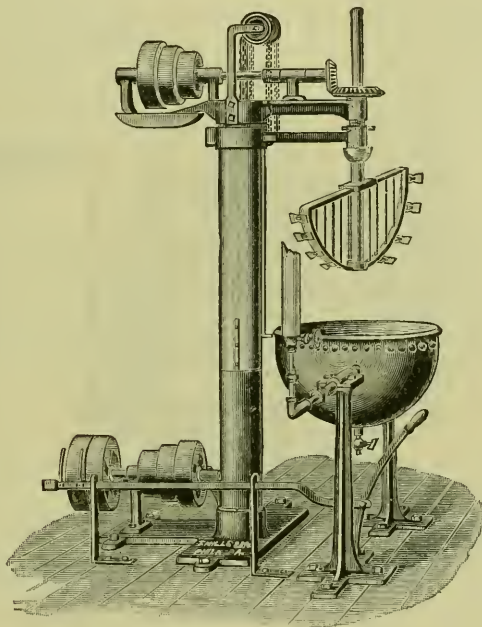

Prices according to the size and shape kettle required. Our standard kettles are as follows:

60 gallons, 36 x 20 inches.....	price, each	\$375 00
45 " 30 x 21 "	"	360 00

Parties having kettles in use can have machines built to suit them.

CANDY MIXING MACHINE NO. 2

Single and Double Motion

Single Motion Mixer is used for caramels, butter scotch, etc.

Double Motion Mixer is used for fig paste, marshmallows, gum work and Japanese cocoanut.

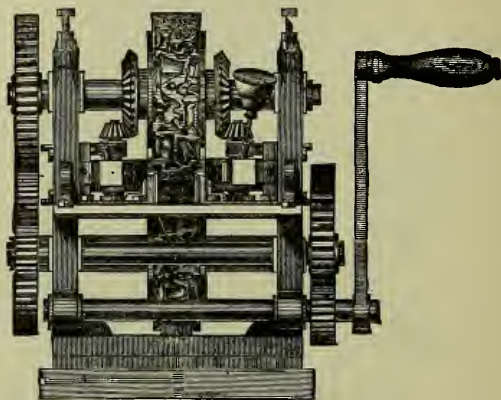

Being furnished with speed pulleys of three changes, the beater can be run to suit the work. The beater is nicely balanced, so that it can be raised clear of the kettle.

Size A,	Single motion, without kettle	price	\$140 00
" A,	Double motion	"	175 00
" B,	Single motion,	"	225 00

Parties having kettles in use can have mixer built to suit.

MILLS' PATENT FRUIT-DROP FRAMES

Complete Fruit-Drop Machine, as represented in the cuts below. The rollers are $3\frac{5}{8}$ inches long, and 2 inches in diameter, and will make any pattern shown in these pages. These machines and rollers are fitted to standard gauges, and will admit of any number of rollers being fitted to one frame, which is so constructed that a pair of rollers may be taken out and replaced in one minute. Parties, after purchasing a machine, may at any time have rollers sent to them guaranteed to work satisfactorily.

No. 1 Frame, without Improvements, for No. 1 Rollers, $3\frac{5}{8}$ inches long \$6 00

This cut represents the Nos. 2 and 3 Improved Patent Frames.

No. 2 Frame, for No. 1 Rollers, $3\frac{5}{8}$ inches long \$10 00
 " 3 " " " 2 " 5 " 15 00

This Frame has brass boxes top and bottom, which are adjustable, so that the rollers can be set to run true at all times—an improvement long needed by the trade—and is provided with T-slots front and back, into which the heads of the bolts are fitted to secure the machine to the bench. The rollers shown are for making two patterns; they represent No. 3, Acid Drop, and No. 12, Fish. The guide plates can be set forward to the middle of the rollers, so that either pattern may be made separately.

PATTERNS FOR FRUIT DROP ROLLERS

We can cut any of the following patterns on the different size rollers, or we will cut to order special patterns from samples.

No extra charge for two patterns cut on the one pair of rollers.

Three patterns on one roller, \$2.00 extra.

Names or initials put on drops without extra charge. Trade-marks and script letters extra.

Boston Chip Rollers, upper roll is plain, and the lower roll is finely ribbed.

CHAPMAN'S ALMOND PASTE

A combination of the finest and most carefully selected materials, scientifically put together, producing an Almond Paste unmatched for Purity, Flavor and Keeping Qualities. Capable of producing the most Delicious Macaroons and other similar dainties.

"I HAVE never failed to produce from it perfect macaroons." "My trade has more than doubled since I began using it." "Can't be beat." "Has no equal." "Perfection itself." "Makes splendid macaroons."

For the
Production
of....

PERFECT MACAROONS

ALWAYS USE

Chapman's Almond Paste

PREPARED ONLY BY

Chapman & Smith Company

185 and 187 West Randolph Street
CHICAGO, ILL.

Gelatine

HERE are many Gelatines on the market, sold under pretentious names and showy labels. The merits of the Gelatines we sell are not in a flowery name or a showy label, but in the quality of the goods themselves. Years of experience have enabled us to select JUST THE GOODS NEEDED for fine work, such as ice cream, jelly, charlotte russe, etc. You can depend on our Gelatines. Good goods always go the farthest and are the cheapest in the end. ❀ ❀ ❀ ❀ ❀ ❀ ❀ ❀ ❀ ❀

ROLLING PIN SHEET GELATINE

Clear and tasteless. Very thin sheets
There is none better

PRIZE MEDAL FLAKE GELATINE

Our Flake Gelatine is just the thing to give a body to ice cream. Pure and tasteless. Light in color.

Lemon Oil

OF all essential oils the Oil of Lemon is more largely used than any other, and it is mainly on this account that the selecting and handling of this principal oil has become in a large measure a business by itself. Great care should be taken in selecting oils of standard grade and guaranteed purity. The "Chapman & Smith Company's Selected" Oils need no special words of commendation—suffice it to say: "We guarantee them." These oils are selected by our own representative on the producing market.

JELLY THAT IS JELLY

It is apparent to hundreds of bakers that there are not nearly as many Jelly Cakes, Jelly Rolls, Jelly Tarts, etc., sold as there were a few years ago. This is accounted for by the fact that for some time bakers have been using a very inferior grade of Jelly; and it is no wonder that Jelly goods are not in demand; in fact, it is a wonder that any real first-class trade will buy Jelly Cakes when made from some of the "cheap stuff" that is being used. We are now making a very fine line of Jellies, Jams and Marmalades, "New England" brand, and are selling them at right prices for this grade of goods. Try a pail with your next order, and see if it will not increase your trade on Jelly Cakes, Rolls, etc.

Bakers' Delight REDCURRANT JELLY

This Jelly combines all the qualifications necessary for a grade of goods for EVERY-DAY USE.

GOOD COLOR,
A GOOD SPREADER,
PROPER CONSISTENCY.

This is the Jelly that wins trade when used in Jelly Roll and other similar goods.

New EnglandSUGAR JELLY....

HERE
IS A
GRADE
OF
GOODS
FOR
FINE
TRADE.

IT IS
JUST
THE
PROPER
CONSISTENCY
AND
COLOR.

It has the real sugar in it, and produces the very best results among the trade where quality and flavor are considered.
Try this, and you will never complain.

EXTRA...Extra Fine Sugar Jelly

ANY a BAKER wants a fine grade of pure Sugar Jelly, something far and beyond the ordinary grade of goods, and better than the "sugar goods" for very fine work. Many a CONFECTIONER wants a fine Jelly for centers to candies. Many a CATERER, HOTEL KEEPER and RESTAURANT PROPRIETOR wants a class of goods, home-made plan, that he can serve with Game of different kinds, to the satisfaction of his patrons. This Jelly will fulfill all requirements along these lines. It is guaranteed

PURE FRUIT JELLY

CHAPMAN & SMITH COMPANY,

Makers of JELLIES,
JAMS, PIE FILLINGS, Etc.

135-7 W. Randolph Street,
CHICAGO, ILLINOIS.

EXTRACTS

IT is apparent to all users of flavorings that there is about as much difference in quality of flavoring extracts as in anything on the market, and, of course, the low-grade goods are plentiful, many not really being worth the packages they are put up in.

The object in using a flavoring extract is to impart a **flavor** to the goods and improve them, and to accomplish this result, an **actual flavoring** must be used; a combination of aromatics and coloring will not suffice. It is the **quality** of bakery goods, candy and ice cream that makes them sell and creates a larger demand for them. The manufacturer of good goods has no trouble in selling what he makes. The man who makes good goods makes money, because the people want them; to produce these, good flavoring extracts are essential.

To produce extracts of strength, delicacy of flavor and uniformity requires experience, skilled workmen and proper apparatus. Aside from these, no extracts will stand the "fire test" and give satisfaction unless made from good "raw materials." Inferior "raw" products cannot produce good manufactured goods. We have had nearly twenty years' experience in the manufacture of flavoring extracts; our workmen are skilled in their line, and our facilities of the best in every particular.

As we are large importers, we get the very best foreign products that can be procured. Our own representative on the producing fields selects our essential oils with special care, while our vanilla beans are chosen with a view to supplying the demands of the best trade.

There are cheaper goods than ours.

There are dearer goods than ours.

There are none of better quality, and none that give better satisfaction.

**CHAPMAN & SMITH COMPANY, MANUFACTURERS

NO better New Orleans Molasses can be found than these Brands. They have been thoroughly tested through a succession of years, and are selected for the very qualities that make them most desirable for Confectioners' and Bakers' work. Ask any one who has ever used our molasses.

Save Time, Labor, Money and Worry

CLEANED CURRANTS

CLEANEST CLEANED CURRANTS EVER OFFERED
TO THE TRADE. THE FINEST IMPORTED STOCK

WE import direct from Greece all our Currants. They are packed specially for us, so that the fruit is not Crushed or Mashed. Thoroughly washed by a peculiar process, superior to any other in use, the effectiveness of which is shown by the fact that from 60 pounds of so-called "Clean" Currants we take, by our method, six pounds of dirt. Put up in 60-pound and 30-pound cases.

USE ONLY CLEANED CURRANTS PREPARED BY
CHAPMAN & SMITH COMPANY
CHICAGO, ILL.

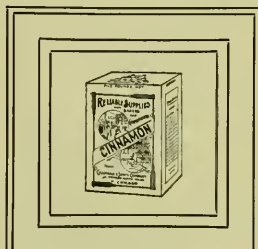

BAKERS soon grow tired of experimenting with Spices. Here are some goods that can be absolutely depended upon. **SELECTED AND GROUND WITH THE GREATEST CARE**, and **POSSESSING THE QUALITIES THAT BAKERS MOST DESIRE**, they commend themselves to every one who uses them.

Cinnamon

Allspice

Ginger African
Jamaica

Cloves

Pie Spice

Nutmeg

Mace

RELIABLE SPICES

OUR OWN GRINDING

STAND in the very front rank of Bakers' Supplies. They have been thoroughly tested, and have received the heartiest commendation of bakers everywhere. They are put up in handsome, convenient packages, all containing full net weight.

MACE and Nutmeg in 1-lb. and 5-lb. tins, with hinged lids. All others in 5-lb. and 10-lb. pasteboard boxes, double thickness, lined and air-tight. The excellence of the goods and the convenience of the package combine to make these Spices deservedly popular.

AMONG the "knowing ones" of the trade it is a recognized fact that Ground Spices are being put up to sell at almost any price. It is possible to so adulterate Spices with different fillings, that the services of an expert are necessary to determine as to their purity. These adulterations appear to be similar in color and taste, but do not impart to the goods that fine, delicate, spicy flavor that is so desirable where spice is used at all. Having made a specialty of supplying the bakery trade with food products for a large number of years, and fully appreciating the needs along these particular lines, we are able to furnish all goods, and especially Spices, which are best suited for use in connection with this important industry. We are eminently **SELECTORS** of the finest goods of this kind. We use every care to select the purest and most wholesome goods, and give special attention to the uniformity and evenness in texture and grinding.

Special attention is called to our **Cinnamon, Ginger and Mace**

CHAPMAN & SMITH COMPANY

GRINDERS OF RELIABLE SPICES

BAKING POWDER

THE QUALITY OF A BAKING POWDER IS MEASURED BY

1. The volume of gas it evolves in the dough.
2. The time it takes to evolve this gas.
3. Its keeping quality.
4. Quantity and quality of substance it leaves in the bread.

POSSIBLY YOU MAY KNOW that Baking Powders are an invention of the present age. They are intended to supersede the slow and uncertain process of raising bread by yeast.

The raising of dough,

whether by yeast or baking powders, is due to the setting free of certain gases, principally carbonic acid gas. The gas, by passing through the dough in the form of very small bubbles, lightens or "raises it." The actual qualifications required of the best baking powder are

but two in number. **First**, the gradual setting free (under the combined influence of air and moisture) of a sufficient quantity of gas to properly raise the dough. **Second**, that it should produce a bread or biscuit quite free from any substance which would be injurious to health.

The Very Best Chemical Authorities

put themselves on record in stating that careful experiments in the chemical laboratory and chemical analyses of test subjects have fully proved that cream of tartar powder is more injurious to the system than powders made of some other material, on account of the residue matter left in the system.

We have made the baking powder question a life study, and are manufacturers of long years' standing. Our make of powders are well known, and are acknowledged to be of superior leavening qualities, and are guaranteed to contain no injurious substances, being pure and healthful throughout.

THE opportunities for adulteration are many to the manufacturer or wholesale dealer in commodities that are being largely and daily used.

This is especially true of Icing or Confectioners' Sugar, and more particularly so because such adulteration is hardly detectable, and prevents the sugar from hardening. Pure sugar, when finely ground, hardens very quickly. And if adulteration is to be put in at all, it is much better for the user to do it, paying sugar price for sugar instead of for starch or other similar articles.

The Icing or Confectioners' Sugar sold by us we grind ourselves from standard grades granulated. It is guaranteed to be free from all impurities. Owing to these facts, this sugar is very sensitive to atmospheric changes, humid weather causing it to harden very quickly. As far as is possible it should always be kept in a dry and even temperature.

A Few Planks From Our Platform

WE have attained to a high reputation among the baker and confectionery trade for honest and straightforward merchandising. Our business methods are the secret of our commercial success. We shall not allow our reputation to suffer, and when a customer sends in his order to us, he may rest assured it will receive proper and just attention.

We are not speculators or plungers. We do not "give away" to our customer some goods and "rob" him on others. Our effort is to sell strictly in accordance with market conditions, and for this reason some of our prices change very frequently.

Most of the specialties used by bakers we manufacture in the various departments of our factory. We know the quality of these goods, and the prices are as low as they can be for high quality.

Goods which come from abroad we import ourselves in large quantities, and our connections with foreign markets are most excellent.

Domestic goods we purchase with great care, and aim to get the lowest prices which reliable firms can give in large quantities. We would rather have our customers complain of price than of quality.

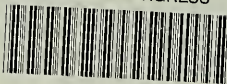

It has always been our policy to give perfect satisfaction to our customers. We will satisfy and please you if you will give us an opportunity.
